NICOLAS VICENTINVS ARCHIMUSICVS
Illustri Comiti Ludovico Galerato. S. P. D.

Vim munere aliquo vivum quempiam donare instituit, diligenter animaduertat opusque quam suae professione, quia, illi oblectamento, et in deliciis sit, et donum quod hominum vos prespondeat, illi donee clario positis, ut arma militis, libros studiosos, litterarum candidato viro: altiusque oculus opus operam (quod ait) perditum ret: quis enim Atheniensi Carthaginem duce philosophorum scripta et monumenta, Aristoteleis elypos, quos superiores dono dedisset, tantum absit ut cum us inuffet gratiam, et hoc cordis suis fisset, ut etiam eorum offendisset, et alienas a se animos. Ego quoque, qui pignore aliquo testari studem meam erga te benevolentiam, observantia, rhythm nos nostros dicere constituere tibi, ita rhythmos animos et studiosos, ut ex caelestibus confiare rhythmos, et harmonia appareas in spea adductis fore, ut nostrum munus tibi succunditatis sit, quod si (et vero) non ingratum fuisse animo tuo sentero, erit id mihi gratissimum, bine enim persicarian probari tibi lucubraciones nostras, meae ateli, quorum utrumque nobis optatissimum, succundissent, accidet. Vale.
THE MOTETS OF NICOLA VICENTINO

HENRY W. KAUFMANN

With the discovery of the quintus part of a fourth book of motets by Vincentino published in 1571, the activity of this unusual musician extends from the narrower sphere of madrigal composition into the larger and more universal aspects of sixteenth-century creativity. Unfortunately, most of these motets exist only in an incomplete form, but even in their truncated state, these compositions reveal an imaginative approach to the problems of setting sacred music.

Our first direct knowledge of Vincentino as a motet composer is derived from his treatise, L'antica musica, published in 1555. In this work, however, the motets serve primarily a didactic purpose. Don Nicola, for example, added to his theoretical observations on the chromatic and enharmonic modes some practical examples of compositions written in these two genera. The first of these was the completely chromatic "Motetino" based on the words of the Easter Gradual, "Haec dies". This work was written not only to demonstrate the chromatic gender, but also

1 The collected works of Nicola Vicentino, edited by the present author, are in preparation for publication as the 26th title in Corpus Mensurabilis Musicae.
2 The author is greatly indebted to Dr. Colin Slim of the University of Chicago for his discovery of this part-book in the archives of the Duomo at Piacenza, Italy in February, 1957.
3 The treatise according to the colophon: fol. [BB8], was published on May 22, 1555. In a letter to the Duke of Mantua on December 15 of the same year, Vicentino mentions a seven-part motet among the works that he had sent to the Mantuan court. No trace of this motet has been found. A copy of this letter (Archivio di stato, Mantova, B. 1252 [Carteggio degli inviati e diversi, 1540-1557]) was sent to the author by Dr. Knud Jeppesen whose help is herewith gratefully acknowledged. The document is also cited by Pietro Canal, "Delia musica in Mantova", Memorie del reale istituto veneto di scienze, lettere ed arti, XXI (1879), 731, and by Fr. X. Haberl, "Das Archiv der Gonzaga in Mantua, mit besonderen Rücksicht auf Giov. Pierluigi da Palestrina", Kirchenmusicalisches Jahrbuch, 1886, p. 33.
4 Vicentino himself, however, admits that he has included in this piece "gradi lunghi dell'Enarmonico", that is, major thirds, in several places, "fatti per incitazione delle parole", which the singer may modify by the use of a flat. Nicola Vicentino, L'antica music ridotta alla moderna prattica... (Rome: Antonio Barre, 1555), fol. 62.
"so that every one may see that the chromatic music can be sung in the churches in a loud voice" 6.

This rather curious remark seems to indicate that the chromatic music was not normally used for ecclesiastical compositions but was associated rather with the genres of chamber music which involved quieter dynamics. This is borne out further by his observation that the dieses of the enharmonic "are sung in the chamber, with a low voice because they are most suave" 7. It would appear that the more subtle the intonation, the quieter a piece should be sung to assure accuracy. For this reason, choral performance of chromatic compositions may have seemed more difficult than diatonic ones. However, with the extension of tonal resources by Vicentino to include the extremely small divisions of the enharmonic, the chromatic must have seemed relatively simple and hence suitable for sacred works.

There were apparently some musicians who, although they might have accepted the chromatic gender in this four-part composition, doubted that it could normally be written in a piece for four or five parts:

Perhaps some remain doubtful of the genera, whether in compositions one can demonstrate them accompanied in four, five and more voices. The disciple must realize that one can compose [in] all the genera, and when the composition will consist of more than four voices, that will give more convenience to the composer... 8

To allay these fears, Vicentino included in his treatise a portion of one of his five-voiced Lamentations, entitled "Hierusalem" 9.

Finally, to demonstrate the possibility of using each of the genera in turn within the same composition, Vicentino composed a Latin ode, "Musica prisca caput" in honor of his patron, Cardinal Ippolito II d'Este, the first verse of which was written entirely in the diatonic genus, the second in the chromatic, and the third in the enharmonic, with the diesis

6 "... accio che ogniuno vegga che la musica Cromatica si può cantare nelle chiese ad alta voce..." Vicentino, op. cit., fol. 61v.
7 "... si canteranno nelle camere, & con bassa voce, perche sono suavissimi..." Ibid., fol. 65v.
8 "Forse alcuni staranno dubbiosi de i Generi, sè nelle compositioni si possono dimostrare accompagnati à quattro, à cinque, & à piu voce. il Discepolo hà da sapere che tutti i Generi si possono comporre, & quando la composizione sarà à piu di quattro voci, quelle darà più commodità al Compositor..." Ibid., fol. 70v.
9 A transcription of this work can be found in Torchi, op. cit., I, 145-146. The text forms part of the Lamentations of Jeremiah which serve as the lessons for Matins of Maunday, Thursday, Good Friday, and Holy Saturday. Cf. The Liber Usualis, ed. Benedictines of Solesmes (Tournai: Desclée & Co., 1938) pp. 628, 670, 716. No other of these five-part compositions of Vicentino is now extant.
THE MOTETS OF NICOLA VICENTINO

represented by dots over the affected notes\textsuperscript{10}. This ode belongs, in a sense, to that series of musical compositions to Latin texts which, beginning with the setting of Virgil’s “Dulces exuviae…” by Josquin and including the famous “Quidnam [Quid non] ebrietatis” of Adrian Willaert, concentrated on featuring a wide variety of experimental techniques of a most advanced nature. Vicentino summarized, in this single composition, the essence of his theoretical innovations.

Of the motets intended for practical rather than didactic purposes, the six-voiced “Heu mihi domine” is of especial importance because it is the only extant version of a sacred work by Vicentino in a chromatic idiom that exists in a complete form. The manuscript of this motet was added, in an unknown hand, after the final pages of the six part-books of Orlando di Lasso’s *Magnificat octo tonorum* . . . (Nuremberg: Theodor Gerlatz, 1567) now in the University Library at Wroclaw, Poland\textsuperscript{11}. If the date of the Lasso publication can be used as a guide, this is precisely the time when Vicentino was being encouraged by Cardinal Borromeo to write religious works in a chromatic form\textsuperscript{12}. The copyist was well aware of Don Nicola’s reputation since the bassus part of this motet is documented with the legend: “Nicolaus Vicentinus, perfectae Musicae divisionisque inventorum”.

The text of this composition corresponds to the two parts of the responsory following the second lesson of the second Nocturn of Matins from the Office for the Dead, but the music does not incorporate any identifiable chant. The overall form agrees with the responsorial structure aBcB that became increasingly prominent in polyphonic music after c. 1520. In keeping with the solemnity of the occasion for which this composition was intended, the scoring emphasizes the use of voices of low pitch and was probably sung by men alone, since the clef-indications call for one mezzo-soprano, two altos, two baritones, and one sub-bass\textsuperscript{13}.

The writing is predominantly chordal, exploiting the expressive qualities

\textsuperscript{10} This ode appears in Vicentino, *op cit.*, foll. 69v-70v. For a transcription of this work, see the Appendix to this article.

\textsuperscript{11} Friedrich Kuhn, “Beschreibendes Verzeichnis der alten Musikalien — Hand- schriften und Druckwerke — des königlichen Gymnasiums zu Brieß”, *Monatshefte für Musikgeschichte*, Supplement to XXIX (1897), 26, gives a detailed description of the part-books and the handwritten additions thereto. Other composers represented in this manuscript include Lassus, Clemens non Papa, Jacobus Vaet and Sweelinck.

\textsuperscript{13} This clef combination resembles the one used by Josquin in his “De profundis” which, according to Glareanus, indicated that the low register was to be interpreted literally, with no implied transposition. Gustave Reese, *Music in the Renaissance* (New York: W. W. Norton, 1954), p. 249. For the relationship of this scoring to Vicentino’s concept of *mutata voce* see infra, p. 180.
of the rich harmonic sonorities of the lower voices. Both melodic and harmonic dissonances occur. Cross-relations appear occasionally, especially when successive chords stand in the relationship of a third to one another. A strikingly dissonant treatment of this kind is effected even within the same harmony by moving, for instance, the minor third, f, of a d-minor chord to its root in the first alto part while at the same time a suspended fourth in the mezzo-soprano part resolves to the major form of the third, f-sharp (measure 106):

The second pars of this motet, beginning with the words “Anima mea turbata est” is treated in a more imitative fashion, but returns shortly to the predominant harmonic type of writing. At the repetition of the B section, the voice-leading brings about an interchange of the two baritone parts. Otherwise the notes in both sections are exactly the same.

The remainder of Vicentino’s motets are available only in an incomplete form. Of these works, the most important is a collection of motets, the quintus-part of which was discovered among the holdings of the cathedral library at Piacenza, Italy14. This book was published under the following title:

Quintus. [within an ornamental frame supported by winged putti at either end] /15 Archimusici/theorici et practici/ et novae harmoniae inventoris./ Nicolae Vicentini./ Moteta (sic!) cum quinque vocibus./ Liber quartus./ Mediolani./ Apud Paulum Gottardum Pontium, 1571.

14 The author is indebted to the Rev. Guido Tammi of the Piacenza Cathedral staff for his aid in obtaining a microfilm copy of this work.
15 This ornamental frame is identical with the one on the title-page of Vicentino’s fifth book of madrigals, published by Pontio in 1572.

a The *cantus, altus, quintus* and *bassus* parts of this motet appear in a published collection of motets by various authors (including Willaert and Cipriano de Rore) in the Biblioteca Estense, Modena, Mus. No. C. 313.

b Robert Lippe (ed.), *Missale Romanum Mediolanii, 1474* ("Henry Bradshaw Society" XVII, XXXIII; London, 1899-1907), I, 412-413. This work is a reprint of the first printed edition of the Roman Missal published in Milan in 1474 and is based on a copy now in the Ambrosian Library. The text of this motet is also used as the Epistle for the feast of Saint James the Apostle. *Ibid.*, I, 356.

e Guido Maria Dreves (ed.), *Hymni inediti. Liturgische Hymnen des Mittelalters aus handschriftlichen Breviarien, Antiphonalien und Procesionalien* ("Analecta hymnica ..." IV; [Leipzig: Fues's Verlag (R. Reisland), 1888]), number 7, stanzas 1 and 2, p. 16.

f Lippe, op. cit., I, 149. The second volume of the Lippe edition, subtitled *A Collation with other editions printed before 1570*, indicates that this text also appears as an *Officium* in a 1508 Missal and an *Introitus* in a 1558 Missal for the *Missa de nomine Jesus Christi*. *Ibid.*, II, 334. This feast appears mainly in Roman Missals printed in Venice during the sixteenth-century. See also *infra*, p. 7.

g Dreves, *Hymni inediti. . .*, number 7, stanzas 6 and 8, p. 16. This is a continuation of the same hymn used in Motet IV a and b. See note e *supra*.

h This portion of the motet is described as the second *pars* in the *tabula* but not in the body of the work.

i Lippe, op. cit. II, 165. This text was also found in French Missals printed at Paris in 1530 and 1540.

j *Breviarum Romanum[m]* . . . (Venice: Lucantonio de Giunta Florentinis, 1519), fol. 428v.

k *Ibid.*, fol. 426. This text is the beginning of a homily attributed to St. Hilary.

l J. Wickham Legg (ed.), *The Second Recension of the Quignon Breviary* . . . ("Henry Bradshaw Society" XXXV, XLII; [London: 1908-1912]), I, 365. The text of the motet is excerpted from the middle of the homily.

n Lippe, op. cit., I, 402.
The collection was dedicated to Count Lodovico Galerato, a nobleman of the city of Galerato which lay within the Duchy of Milan.\(^{16}\)

The format of this edition is that of a quarto, with the following collocation: A-C⁴. Beginning with the second leaf, pagination is indicated in Roman numerals, running consecutively from three to twenty-three, with a table of contents or *tabula* on the unnumbered last page. The fifteen compositions which form this collection are here arranged in tabular form for convenience of reference (see page 173).

Although the publication date of these motets falls after the Pian liturgical reforms of 1570, most of the texts are actually of pre-Tridentine origin. Their subsequent omission from the liturgy was conditioned mainly by the zeal of the Roman Catholic church during the sixteenth century in countering the inroads of the Protestant Reformation. Texts such as the "Ave virginum gemma Catherina", the Communion from the Mass of Saint Catherine of Alexandria (Motet XIII) were especially difficult to defend since they were based almost entirely on legendary events. Catherine, of royal Alexandrian blood, in a dispute with the learned pagan doctors of her native city, was supposed to have converted them to Christianity and eventually to have followed them in martyrdom for their faith.\(^{17}\) These wholly undocumented events, which formed the substance of the services venerating the Saint, were replaced after 1570 by texts of a more intercessory nature.\(^{18}\)

---

\(^{16}\) Article, "Galerato", *Grosses vollständiges Universal-Lexicon aller Wissenschaften und Künste...* (Leipzig & Halle: Johann Heinrich Zedler, 1732-1750), Vol. X, p. 114, col. 2. Count Galerato was undoubtedly a patron of the arts since, in addition to this work, the first book of four-voiced madrigals (1564) by the Milanese organist, Gioseppe Caimo, is also dedicated to him. Emil Vogel, *Bibliothek der gedruckten weltlichen Vokalmusik Italiens aus den Jahren 1500-1700* (Berlin: A Hauk, 1892), I, 131.

\(^{18}\) A similar viewpoint probably conditioned the revision in 1548 of the Breviary of the Humiliati. The majority of the changes were concerned with the reestablishment of the recitation of all 150 psalms in regular order... a practice which had been interfered with because of the proliferation of festivals and the resultant necessity for "proper" psalms rather than the regular ones. In order to achieve their desired goals, the reformers omitted many of the feasts, especially those based on legendary events in the lives of Saints — the least defensible parts of the medieval Breviary. J. Wickham Legg, "The Divine Service in the Sixteenth Century Illustrated by the Reform of the Breviary of the Humiliati in 1548", *Transactions of the St. Paul's Ecclesiological Society*, II (1886), 275-276. Many of the Roman Breviaries and Missals were reevaluated and reorganized in the light of Catholic self-examination and possible Protestant criticism, since new and revised versions appeared throughout the *Cinque-
Although only six of the motet-texts are still in current usage, it is significant to note that many of the others are associated with feasts which became increasingly important in Roman Catholic theology after the Council of Trent. The origin of the Feast of the Holy Name of Jesus (Motets IV and VI) goes back only to the early sixteenth century when it was celebrated by priests of the Franciscan Order. The “In nomine Jesu” (Motet V) also appears as the Introit of this feast in Roman Missals printed in Venice during the Cinquecento, and is used with this function in the present-day liturgy. In the Missale Romanum Mediolani of 1574, however, this text is given as the Introit for Wednesday in Holy Week and is designated as the stational Mass at the church of St. Mary Major (“Statio ad sanctam Mariam maiorem”).

Mariology is, of course, more closely associated with the Roman Obedience than with any other form of Christianity. Specific Marian associations are revealed in Motet II, for the Presentation of the Blessed Virgin Mary (November 21), Motet IX, one of the four Marian Antiphons, and especially Motets VII, VIII and X, in connection with the Feast of the Immaculate Conception (December 8).

The use of a text from the feast of our Lady’s Presentation in the Temple seems to indicate that some of the motets in this collection were cento, both with and without ecclesiastical approval. One of the most successful was the reformed Breviary proposed by the Spanish Cardinal Quignon, which seems to have been the source for many of the motet texts. The first edition, though not approved, went through eleven printings. The second recension, first sanctioned in 1536, appeared in over 100 editions before it was abolished in 1568 by a bull of Pope Pius V, in preparation for his own reforms. Legg, Quignon Breviary..., I[v].

Motet III (in the Ambrosian rite only), V, IX, and XIII-XV (from the Office for the Dead).

Gaspar Lefebure, Saint Andrew Daily Missal (St. Paul, Minnesota: E. M. Lohmann, [1957]), p. [107]. This feast was adopted universally for the whole church by Pope Innocent XIII in 1721 and its present date — the Sunday occurring between January first and sixth, otherwise on January second — was fixed only in the twentieth century. Ibid.

See supra, Table I, note f.

The Liber Usualis, p. 446.

In present Roman usage, the introit for this feast uses only the first part of the text (through “et infernorum”) with the substitution of “Domini” for “Jesus”, but continues with different words of a penitential character. Ibid., p. 612.

The Roman Missals associate many of the Masses of great feasts or privileged ferias with a “station” in some church of Rome, In the Middle Ages, “making the station” involved the procession of the faithful, singing the Litany or psalms, to the designated church where the Pope or his legate would meet them to celebrate the Mass. The stational procession and Mass has recently been restored at Rome, especially in Lent, but obligatory Papal attendance has been relinquished. Lefebure, op. cit., p. XXVI.
THE MOTETS OF NICOLA VICENTINO

probably composed a year or more before their actual publication, since this particular festival, because it was based only on a pious belief and not a point of fact, was suppressed in 1570 during the Pontificate of Pius V (1566-1572) and not re-introduced into the Roman calendar until 1585, upon the accession of Sixtus V to the Papal throne.\(^{25}\)

Pius X in 1570 also instituted a new Office for the Feast of the Immaculate Conception, but the texts used by Vicentino are derived from earlier sources and give further evidence of the lag between the composition and publication dates of his motets. The dogma of the Immaculate Conception was not defined until 1854\(^{27}\), but theological controversy about this feast dates back to the Middle Ages, and rose to prominence during the Renaissance. In 1476, Sixtus IV decreed that the feast be adopted for the entire Latin church\(^{28}\) and approved an Office of the Immaculate Conception written by the apostolic protonotary Leonard Nogarol which was added at the end of many sixteenth-century editions of the Roman breviary before the Pian Reforms\(^{30}\). It is on this Office that the Vicentino texts are based.\(^{31}\)

One of the peculiarities of these motets is the occasional setting of chapters, lessons and homilies not usually associated with the musical treatment of the liturgy (Motets VIIIa, X, XI, XIII, XIV). Polyphonic versions of these passages do, however, occur, albeit infrequently, throughout the Cinquecento\(^{32}\). It is not at all clear, however, whether they were intended to be sung at the actual service or at some form of semi-private

\(^{25}\) Ibid., p. 1636.
\(^{26}\) T. Lataste, article "Pius V, Saint, Pope (Michele Ghislieri)", The Catholic Encyclopedia, XII (1911), p. 130, col. 1.
\(^{27}\) Lefebure, \textit{op cit.}, p. 1125.
\(^{28}\) Frederick C. Holweck, article "Immaculate Conception", The Catholic Encyclopedia, VII (1910), p. 680, col. 1. The decree of Sixtus IV about this feast did not meet with universal approval. The question was, in fact, referred to the Council of Trent in 1546, which considered it at its fifth session "De peccato originali" but reached no decision. Nevertheless, a new and simplified Office for this festival was incorporated in the Pian Reforms of 1570 and served until the dogma of the Immaculate Conception was declared \textit{de fide} in the nineteenth century. \textit{Ibid.}
\(^{29}\) He is so described in the Breviarum Romanum of 1519 (see supra Table I, note f) where his Office is added in an appendix beginning after the colophon on fol. 416.
\(^{30}\) Legg, ... \textit{Quignon Breviary} ..., II, 266.
\(^{31}\) Vicentino's selection of these texts may have been influenced by the knowledge that Nogarola was a humanist of Vicentine origin. \textit{Dizionario enciclopedico italiano}, VIII (1956), p. 378, col. 3.
\(^{32}\) Hermann Zenck comments on the fact that the texts of Willaert's motets contain not only antiphons, responsories, hymns, and sequences, but also epistles, lessons or parts of lessons. Hermann Zenck (ed.), \textit{Adriani Willaert opera omnia} ("Corpus mensurabilis musiceae"; Rome: American Institute of Musicology, 1950 ...), Vol. 1: \textit{Motetta IV vocum. Liber primus 1539 et 1545}, p. ix.
devotional exercises, although some were definitely assigned to special occasions. For example, the heading which precedes the first of the motets from the Office for the Dead (Motet XIII) reads: “On the death of the illustrious Blanca Pansana de Carcano of Milan” 33 ("In obitu Illustris Blancae Pansanae de Carcano Mediolanensis"). Since the word “obitus” may also indicate the ecclesiastical service on the anniversary of a death 34, and the date of Blanca Carcano’s demise is unknown, the specific purpose for which this motet was intended cannot be ascertained.

From the musical viewpoint, this collection is written in a style that is basically chromatic, although the first motet, which also exists in a fairly complete form 35, is more reserved in this respect than some of the other compositions 36. Nonetheless, the writing in this first motet is free enough to produce an occasional cross-relation. Many of the other motets not only imply a more adventurous harmony 37, but also indulge in melodic chromaticism of an advanced nature. Semitonal movement on the same scale degree, for instance, occurs with some frequency, especially on affective words. In “Iocunda est praesens vita” (Motet III) this half-step motion is found on the word “miserere” (measure 50) and in “Spiritus meus attenuabitur” (Motet XIV) on the similar expression “Miserere mei Deus” (measure 94).

In two passages, the invocation of the name of Jesus is handled in like manner. The second part of “Virtus summa coelestium” (Motet IV) uses the chromatic semitone in connection with the words “O Jesus, powerful name” (“Jesu, Jesu, potenti nomine”). An even more rhetorical approach is found in Motet V “In nomine Jesu”, in which the phrase “[and let every tongue confess] that our Lord Jesus Christ [is in the glory of God the Father]” (“[et omnis lingua confiteatur] quia dominus noster Jesus Christus [in gloria est Dei patris]”) is outlined by a diminished triad, f sharp-a-c, on the words “quia dominus noster”, and the Lord’s name invoked by rising a half-step to c sharp and continuing with notes of much longer value for added emphasis (measures 35-40):

33 Blanca Pansana de Carcano was the wife of the Milanese physician and humanist, Archileus Carcano, who was renowned as a patron of music and the arts. Filippo Argelati, Biblioteca scriptorum Mediolanensium . . . (Milan: in sedibus palatini, 1745), pp. 290, 408.
35 supra, Table I, note a.
36 In general, greater freedom seems to be associated with the settings of Office texts than those of the Mass.
37 See, for instance, Motet III, especially the secunda pars and, above all, the last three motets from the Office for the Dead.
This is in keeping with the observation in the treatise that “in motets, according to the devout words, coming somewhat to a stop induces a great deal of devotion” 38.

From time to time, “avoided” cadences 39 can be found, but not so frequently as in Vicentino’s madrigals. Even when the cadence is normal, it may be harmonized deceptively (Motet I, measures 38-39). Harmony, in general, seems to be the germinal factor, since the leaps and turns of the rather awkward lines of this quintus-part seem to result from a chordal rather than a polyphonic concept. The more complete setting of the first motet will serve to confirm this viewpoint.

Musical pictorialism also plays a significant role in these works. See, for instance, the precipitous scale-wise ascent of an octave on the word “coelo” (Motet VIII, measure 16-17), and the roulade on “gloriosa”, in the second part of the same motet (measure 71) involving the use of fusae. A rather interesting example of word-painting with striking harmonic implications occurs in “Spiritus meus” (Motet XIV). The part begins on a g sharp, and after a depiction of the phrase “my days are short” (“dies mei breviabuntur”) by the simple device of following two semibreves by a series of short semiminims (measures 6-8), the melodic line descends to

---

38 "... ne Motetti, secondo le parole divote, il star alquanto fermo, induce divotione assai ..." Vicentino, op. cit., fol. 81.

39 The term “cadence”, to modern ears, has a definite harmonic connotation ... a concept which does not correspond exactly to the “cadentia” of which sixteenth-century theorists wrote. To Vicentino, each voice-part has its own typical melodic conventions, the so-called “atti delle cadentie” or cadential formulas. Ibid., fol. 54v. To the Cinquecento musician, it was the congruence of the separate voices, each with its own stereotyped melodic formula, that produced the cadential harmony. Of all the types of cadences described by Vicentino, one, in particular, has achieved special significance because of its use in his first and fifth book of madrigals. Its characteristic nature is indicated in the treatise by the very chapter-heading under which it is described: “Explanation of cadences which do not conclude” (“Dimostrazione delle cadentie che non concludeno ...”), and in the illustrations offered by the theorist with the superscription: “Example of cadences... which avoid their conclusion” (“Essempio delle Cadentie... lequali fuggano la sue conclusione”). Ibid., foll. 53-53v.

Zarlino is even more clear in his discussion of this concept. To him, a cadence is used to designate a general cessation in the harmonic movement [that is, for purely musical reasons] or to indicate “the perfection [that is, conclusion] of the sense of the words to which the piece is composed”. (“... la perfettione del senso delle parole, sopra le quali la cantilena e composta.”). Gioseffo Zarlino, Le istitutioni harmoniche (Venice: [Pietro da Fino], 1558), p. 221. He then goes on to say that when an intermediate point of repose is desired, but the thought of the text has not been
a low d flat to underline the word "sepulchrum" (measure 12-14):

Later in the same motet (measures 60-62), the concept of darkness evoked by the expression "in tenebris" calls for a return to the same d flat.

More often, however, Vicentino attempts to convey the emotive quality of a whole passage or an entire work rather than to concentrate on individual words. One of his techniques embodies a scoring of contemplative, penitential or mournful compositions for a combination of voices which he calls "mutata voce". This inscription appears over three of the motets in this book (Numbers VI, XIV and XV) and is implied in the arrangement of clefs employed in "Heu mihi domine" attached to the Lassus part-books at Wrocław 40. According to the treatise, this expression indicates that only men's voices within a limited range are to be used in the performance of such works:

... when one composes a composition à voce mutata, that is without sopranos, watch that the extreme ranges do not exceed fifteen tones [two octaves] and at most, sixteen with the semitone, and this will give these pieces seriousness 41.

completed, then the melodic formula should avoid ending on the unison or octave, but end rather on the third, fifth, sixth, and similar consonances "because to terminate in this manner is not to end in a perfect cadence, but is known as avoiding the cadence.") ("... perche il finire a cotesto modo, non e fine di Cadenza perfetta: ma si chiama fuggir la Cadenza ...."). Ibid., p. 225.

This deceptive type of ending gives rise to a stylistic trait which assumes singular importance because of its relevance to the problem of musica reservata. The only source that discusses this much disputed term in technical language can be found at Besançon in an anonymous contrapuntal treatise dated 1571 which states: "In continuous rhythm ... avoid the cadence so that what they call musica reservata is created" ("In rhythmo ... continuo clausulam fugies, ut fiat, quam vocant musicam reservatam."). This treatise, entitled "De Musica", has been reprinted with a free German translation by W. Bäumker, "Ueber den Kontrapunkt", Monatshefte für Musikgeschichte, X (1878), 63-65. Perhaps an examination of Vicentino's and Zarlino's treatment of this cadential device may help to throw more light on the subject.

40 See supra, pp. 171-172.

41 "... quando si comporrà una composizione à voce Mutata, cioè, senza soprano; s'avvertirà che gli estremi non passino quindici voci, & al più in sedici con il semitono & si darà quella gravità ..." Vicentino, op. cit., fol. 84 (incorrectly numbered 79) v. Compare this statement with Morley's remarks that "'musicians also used to make some compositions for men only to sing, in which case they never pass this compass: [the example which follows is limited to a range of two octaves]", and, further, "songs which are made... in the low key are composed with more gravity and staidness". Thomas Morley, A Plain and Easy Introduction to Practical Music, ed. R. Alec Harman (London: J. M. Dent, [1952]), p. 275.
The "mutation" is generally accomplished by reading the soprano part an octave lower, thus transforming it into a tenor part 42.

Rhythm is also used to depict the meaning of the text. The opening phrases of the third motet, "Iocunda est praesens vita", employ a rhythmically identical, almost dance-like organization in $\frac{3}{2}$ to interpret the words "Delightful is the present life"; then the mensuration changes to $\mathcal{C}$, and the whole mood of the music is altered to conform to the concept of the text, "and it passes, [and terrible is Thy judgment, O Christ]" ("et transit, terribile est Christe iuditium").

Passages in $\frac{3}{2}$ can be found in a large proportion of these compositions 43, and almost every time they appear, a regular patterned phrase-structure is introduced, which stands in marked contrast to the free rhythmic organization of the rest of the motet. Since this technique occurs most often at the end of a piece or one of its sections, it contributes to an overall sense of form that helps to unify the composition. Both parts of Motet IV end in such a passage, and although the melodic material varies, the regularity of these phrases establishes a resemblance that implements the responsory organization of the text. Motets VI and VII are constructed in a similar manner, but the responsory structure is further confirmed by the use of indentical melodic patterns.

A responsorial construction, but without the mensural shift, unifies the motets from the Office of the Dead. "Parce mihi domine" (Number XIII) ends with the petition "miserere mei Deus" featuring a recitative-like reiteration of the word "miserere" on one note, c sharp (measures 85-87). "Spiritus meus" (Number XIV) treats the petition in a like manner, but adds the words "et salva me" with a different cadential ending. The complete text "miserere mei et salva me" reappears at the end of both sections of "Peccantem me quotidie" (Number XV), employing the same music

42 Vicentino, op. cit., fol. 92v. It is also possible on occasion to "convert" a tenor part into a soprano by raising the tenor an octave, although this practice seems to have been less common than the reverse procedure. Ibid., fol. 93. In the seventeenth-century treatise of Silverio Picerli, Specchio secondo di musica... (Naples: Matteo Nucci, 1631), p. 65, the expression "voci mutate o traspportate: refers to the "transposition or mutation of voices... above or below themselves", ("... trasportatione, o mutazione di voce... sopra di se o sotto di se") as much as an octave, thereby associating this term with the theory of the use of the "chiavette" for purposes of transposition. For a detailed exposition of this vexing problem, see Arthur Mendel, "Pitch in the 16th and Early 17th Centuries", The Musical Quarterly, XXXIV (1948), 336-357, 575-578.

43 Passages in $\frac{3}{2}$ occur in all but the last six motets. They are found at the beginning of number III, at the end of numbers I, II, V, VIII, IX and at the end of each section of numbers IV, VI and VII.
as the previous motet. The last two compositions are further related to one another by the indication that they are to be sung *mutata voce*, thereby accentuating the mournful circumstances under which these pieces were to be performed.

Since these motets are designated *Liber quartus*, the possibility exists that, in time and with good fortune, other collections of Vicentino's works in this form may still come to light. Unhappily, at present only one other example of this genre is extant, and that also in an incomplete version. Manuscript B. 223-33 of the Proske Music Library in Regensburg contains the alto, tenor, bass and *sexta vox* of the motet "*Infelix ego omnium auxilio* (II. pars): Ad te igitur piissime Deus" 44. This composition is written in a moderately chromatic style and, in general, adheres to the suggestions of the text in its musical delineations. Thus, the phrase "celum (!) terramque" encompasses the range of a tenth within the space of three notes (bass, measures 13-14) to depict the gap between heaven and earth, and the question "ubi confugiam?" is set with a rapid melisma in all parts on the word of flight (measures 22-26).

Most salient is the replacement of the words in the *altus*-part by an *ostinato* repetition of a different text, "miserere mei Deus", always intoned according to the following formula:

\[
\text{Miserere mei Deus}
\]

This simple *cantus-firmus*, reminiscent of a psalm-tone, is identical with the famous "Miserere" melody of Josquin 45, and is treated technically in a similar manner. In the first *pars*, the individual entrances, separated by long intervening rests, appear on \(a^1, e^1, a, e^1, a^1, a\), that is, in a tonic-dominant relationship, to use modern terminology. In the second *pars*, the successive entrances spell out the ascending scale-pattern \(a, b, c^1, d^1, e^1, f\)-sharp, \(g\)-sharp, \(a^1\) 46. Against this *cantus*, Vicentino has written parts in simple counterpoint, that, as in so many of his works, seem to spring from a basically harmonic conception.

44 Sammlung Butsch, Signatur B 223-33. The author was unable to consult the entire manuscript, but is grateful to Dr. Schraml of the Proske Library for a microfilm of the Vicentino motet and the designation of the extant parts. Only the *altus* part is specifically labelled in the copy at hand. The source of the text has not been traced.

46 Vicentino may well have known two other settings of the "*Infelix Ego*" text which use the phrase "Miserere Mei Deus" in a similar manner: Willaert's six-voiced setting, published by Montanus and Neuber in 1556 and the motet of De Rore on the same text published in 1595 by Gardano. The "Peccantem quotidie" of Jachet
These motets, despite their incomplete form, reveal many of the attitudes towards sacred music that conditioned the progressive composers of the later sixteenth century. Unfortunately, there are no earlier works of Vicentino in this genre with which to make a comparison, such as exist, for instance, in the case of his madrigals. Nonetheless, even as a torso, they present a concept of sacred composition that is in need of more investigation, and it is hoped that future studies in this area will recognize the significance of Don Nicola’s contributions.
